

INDICATING DEVICE

Abstract

An indicating device for computers with at least one operating system, an interface for communication by use of a USB or blue-tooth connection, an optically perceptible display apparatus utilizing one or more LED's, and a selector switch for designating a particular operating state or specific communication information is provided. The display apparatus includes an indicating device in the form of a play figure wherein the position of a body part can be moved, i.e. a teddy bear, or an electric motor and rotary parts, i.e. a windmill, or an analog measuring instrument with a needle, i.e. a speedometer and a speedometer needle, or a pump for a water flow, i.e. a room fountain, located in the free upper edge of the monitor of a computer system or an area on the table plate alongside the computer monitor.
